

OPERATING TIPS

In the event the Test Center does not perform to your expectations:

General:

1. Make sure all cables are connected properly.
2. If meter needle sticks or if you take your thumb and rub it across the meter and the needle follows it, use a staticide spray on the meter face cover. (An Anti-Static spray from Radio Shack, or local electronics store should work fine).

Modulation:

1. Check microphone gain switches.
2. If you are getting low reading, and your Test Center and Microphone adjusts are okay, you may have a problem with the unit. Please call the number on the back of this card.

SWR & Watt Range:

1. Check RF Level switch orientation.
2. Units are calibrated to read full scale at 4 Watts
